GETTING TO KNOW OUR KETTLE

IMPORTANT: Please keep these instructions safely for future reference not in accordance with the instructions on using the kettle, will invalidate the guarantee.

This unit is warranted for defective materials or workmanship for one year from the date of purchase. The warranty is valid for any manufacturing defects only. This warranty covers operational defects incurred in normal use and does not apply in the case of damage, abuse, mishandling, accident, or failure to follow operation instructions. Narita shall have no responsibility for any damages incidental to equipment and its sole responsibility shall be for the repair of replacement as indicated, except for shipping and handling costs. There are no implied or expressed warranties of fitness or merchantability which extend beyond the above warranty.

Note: Any unit for reimbursement or repairing should be sent back with original complete box to the authorized service representative.
How to use the Kettle:

1. Make sure you have read and understood the section on general safety before continuing.
2. Before you use for the first time, fill water up to maximum and boil. Then discard the boiled water, let the kettle cool, rinse it thoroughly. Repeat this three times to remove any dust, etc.
3. The kettle is designed to use throughout the world. This has been achieved by using twin heating elements. One to operate at 110/120v and the other to operate at 220/240v. The underside of the kettle contains a voltage selector which needs to be turned to the correct voltage for the country/region one is in. To do this, insert a screwdriver into the selector and rotate the arrow to the correct voltage.
4. Fill in the required amount of water ensuring the water is above the “Min” mark but not above the “Max” mark.
   *Warning: If the water is over filled, there is a risk that boiling water may be ejected and the performance of the kettle may be adversely affected.*
5. Do not tilt the kettle backwards when filling or carrying.
6. Ensure the kettle lid is closed when filled before plugging the kettle power cord into the power socket. If the lid is not in position, the kettle will not automatically switch off and hot water will spill out of the kettle.
7. Once the kettle is plugged into the power socket, press the power on switch “Reset”. The neon light will illuminate to indicate that the kettle is connected and has started to heat up.
8. When the water boils, the kettle will switch itself off and the neon light will go out.
9. Unplug the kettle from the power socket before pouring.
10. Pour the boiled water slowly to avoid the risk of splashing.
11. To reuse after boiling, empty the kettle to allow it to cool slightly.
   *Note: If hot water is left in the kettle this will prevent the thermostat from setting. If you want to switch the kettle off before the water boils, simply unplug it. This will not affect the performance of the kettle.*

Water Scale and removal:

1. There may be a case that the water inside the kettle appears cloudy or greasy when boiling. This is caused by calcium carbonate: a harmless naturally occurring mineral within the water and may become apparent when water is boiled.
2. To minimize the scale build up, empty the kettle and rinse it thoroughly after each use and never leave the water in the kettle over night.
3. It is suggested to remove the scale by boiling water with a mixture of white vinegar and leave it over night and then rinse the kettle thoroughly.

Cleaning Your Kettle:

1. Before cleaning make sure the kettle is unplugged from the power source and that it has cooled down.
2. Clean with a damp cloth and if necessary use a little bit of liquid (no harsh abrasive cleaning agents)
3. Wipe the kettle until it is completely dry before storing it.

General Safety:

1. It is imperative that you select the correct voltage before using. Failure to do so will damage kettle.
2. When in use, position the kettle on a firm, level surface, close to the power socket and out of reach of children.
3. Do not use in the bathroom or near any source of water or where any liquids are present.
4. Do not place the kettle or the power cord on or near any hot surface (including hot plates of burner).
5. Do not let the power cord hang over the edge of the work surface or touch hot surfaces.
6. Do not allow children to use the kettle.
7. Even though the kettle has the function with boil dry protection, but never use it without water. If the function of boil dry protection has turned the kettle, please let it cool down completely before re-use.
8. The kettle must not be covered during use.
9. Do not pour anything while the kettle is switched on.
10. When cleaning the inside of the kettle, do not use a screwdriver or fork or any items of similarity as these may cause damage to the heating plate.
11. The kettle should not be moved or touches when in use. Do not leave the kettle unattended when it is in the process of boiling water.
12. Always unplug the kettle from the power socket after use and let it cool completely before cleaning and storing it.
13. Remove the water scale from the kettle frequently, as large build up of scale may affect performance and reduce the life span of the heating plate.
14. When cleaning, never let the cord come in contact with water or any other liquids.
15. The kettle is only made for boiling water; heating milk or other liquids may damage the kettle.

WARNING: THE APPLIANCE MUST BE EARTHED

Do not operate the kettle with a damaged power cord or plug. If it is damaged, return it to our service department for repair. This kettle is for household use only. Do not use outdoors.

The attached plug is for use in United States, dual voltage for world wide use (some countries may need a plug adapter).
